

Please make all VRS providers equipment compatible with each other so I can call others using the phone number feature of the videophone instead of using complicated ip addresses. Hearing people can use their preferred phone carrier and make phone calls to people who choose another phone carrier. Deaf people who choose one VRS provider are not able to connect with people who use another VRS provider, this is not equal to hearing. Also, please don't allow vrs providers to block my access to other vrs providers when using their videophone. It is important to have a fast connection to an interpreter for emergency situations!

thank you!
